

Anti-Criminal Psychology

The criminal mind is rooted in jealousy and revenge; anti-crime is attributed to forgiveness and loss minimisation. In small countries, the suicide rate is higher than the homicide rate. Suicide, however, is sometimes a sham, not a spur-of-the-moment act, but a form of murder to inflict harm on others. The high rate of homicide among inhabitants of large countries may not necessarily be murder, but may also be a transient act.

The length is related to the blood type : a person with blood type O commits suicide, which takes a long time to conceive and involves others; a person with blood type A commits suicide, which also takes a long time to consider, but does not involve others; a person with blood type B commits suicide, which is mostly done on the spur of the moment.

Medical Blood Types

- The three oldest blood types, O, A and B
- Europeans, more than 70%, are type O
 - More than 70% of the British, are type O
 - Over 70% of Germans, are O
 - Over 70% of the Swiss, are type A
 - Over 70% of French, are Type B
- Over 70% of Asians, are Type B
- Over 70% of Japanese, type A
- Emerging blood group, type AB

Logical blood type

- Over 70% of British, are OO
- Over 70% of Germans, are OO
- Over 70% of the Swiss, are type OA
- Over 70% of the French, are OB
- More than 70% of Japanese are AB
